

CHATGPT PROMPTS USED:

I want to build an end-to-end Formula 1 Data Engineering project using Databricks, AWS S3, and Neon PostgreSQL. Design the complete project architecture, recommend business objectives, and explain the data flow from ingestion to dashboards.

Explain me step by step how to create a AWS S3 object store and Neon for my databricks project.

How to setup up databricks and guide me through the whole process of integrating data creating the architecture and displaying the dashboard and explain me each and every code you give what it does.

How to automate the databricks pipeline.
